

Pharma Agentic AI – Summary Report

Overall Summary:

Respiratory diseases in India have significant unmet needs and pain points, with affordability, limited steroid-free options, incorrect inhaler technique, and lack of low-dose pediatric asthma treatments being major concerns. | The CHEST 2024 guidelines emphasize early COPD screening for smokers, prefer combination bronchodilator therapy, and recommend vaccination. Real-world evidence indicates underdiagnosis in rural India, affordability driving DPI device choice, and continued steroid use despite guidelines.

Internal Knowledge Agent Findings:

Respiratory diseases in India have significant unmet needs and pain points, with affordability, limited steroid-free options, incorrect inhaler technique, and lack of low-dose pediatric asthma treatments being major concerns.

Web Intelligence Agent Findings:

The CHEST 2024 guidelines emphasize early COPD screening for smokers, prefer combination bronchodilator therapy, and recommend vaccination. Real-world evidence indicates underdiagnosis in rural India, affordability driving DPI device choice, and continued steroid use despite guidelines.
