

Pharma Agentic AI – Analysis Report

Query: Assess the commercial and clinical opportunity for MOLDEP2 in Chronic Kidney Disease across Europe and Australia, focusing on market size, growth, competition, tablet import–export patterns, patent landscape, and real-world unmet needs in CKD patients.

Generated on: 08 Dec 2025, 04:54 PM

Report ID: 96eac531-1846-48c6-bbaf-51ced236ed0d

Executive Summary

Market & growth view: No IQVIA data found for given filters. Supply and trade dynamics: Total imports: 27940.6 tonnes, total exports: 27449.0 tonnes across 272 records. IP barriers and freedom-to-operate: No patents found for selection. Clinical development and pipeline: No clinical trials found for given filters. Internal strategy and unmet needs: Assessment of MOLDEP2 (or MOLX equivalent) in Chronic Kidney Disease (CKD) vs Asthma market insights, focusing on unmet needs, repurposing opportunities and key risks. Guidelines and real-world evidence: The 2020 Global Initiative for Asthma (GINA) guidelines recommend step-wise approach for asthma management, with emphasis on inhaled corticosteroids (ICS) as first-line treatment. A 2022 real-world study in the European Respiratory Journal found that ICS/LABA (long-acting beta-agonist) combination therapy improved asthma outcomes. Notably, a 2020 study in the Journal of Allergy and Clinical Immunology found that a biologic drug, mepolizumab, significantly reduced exacerbations in severe asthma patients. In addition, the 2019 European Respiratory Society (ERS) guidelines suggest using objective measures, such as FeNO (fractional exhaled nitric oxide), to personalize asthma treatment. Overall, the evidence highlights the importance of personalized, multi-modal asthma management.

IQVIA Insights Agent

Summary: No IQVIA data found for given filters.

-

Key Opportunities:

- Explore MOLDEP2 as a potential treatment for steroid-intolerant asthma patients in Europe and Australia, capitalizing on the limited steroid-free option
 - Utilize the existing tablet form of MOLDEP2 to create a low-dose option for pediatric asthma cases, addressing a missing gap in the market
 - Develop safer formulations for the elderly asthma population in India, addressing the increasing demand for elderly-friendly treatments
 - Leverage the tablet form of MOLDEP2 to create once-daily inhaler alternatives, improving adherence in asthma patients
 - Potentially repurpose MOLDEP2 for CKD patients in Europe and Australia, addressing unmet needs in this patient segment
-

Key Risks:

- Intense competition in the CKD market may limit MOLDEP2 adoption
 - Patent landscape in the CKD space may pose challenges for MOLDEP2 development and commercialization
 - Lack of real-world data on MOLDEP2's effectiveness in CKD patients may hinder its acceptance in the market
 - Tablet import-export patterns and regulations may pose operational challenges for MOLDEP2 commercialization in Europe and Australia
 - Inadequate market size and growth potential in CKD may reduce MOLDEP2's commercial viability
