

Pharma Agentic AI – Analysis Report

Query: Assess the commercial and clinical opportunity for MOLDEP2 in Chronic Kidney Disease across Europe and Australia, focusing on market size, growth, competition, tablet import–export patterns, patent landscape, and real-world unmet needs in CKD patients.

Generated on: 08 Dec 2025, 04:49 PM

Report ID: d5996ba5-def6-4c2f-9736-34bad54ddfb5

Executive Summary

Internal strategy and unmet needs: MOLDEP2 repurposing for Asthma could address key unmet needs, leveraging existing infrastructure and addressing high burden in Tier-2/3 cities, steroid intolerance and pediatric asthma cases. Guidelines and real-world evidence: The latest asthma guidelines from the Global Initiative for Asthma (GINA) 2022 recommend step-up treatment for symptoms, increased use of inhaled corticosteroids (ICS), and personalized treatment approaches based on patient characteristics and comorbidities. Real-world evidence from a study published in the Journal of Allergy and Clinical Immunology found that adding biologic therapy to ICS improved lung function and reduced exacerbations in patients with severe asthma.

Internal Knowledge Agent

Summary: MOLDEP2 repurposing for Asthma could address key unmet needs, leveraging existing infrastructure and addressing high burden in Tier-2/3 cities, steroid intolerance and pediatric asthma cases.

Details:

Documents:

- [respiratory_field_insights.pdf](#)

Key Opportunities:

- Once-daily inhaler formulation with safer steroid-free options for elderly patients
 - Target Tier-2/3 cities with more affordable inhaler solutions
 - Offer alternative therapies for steroid-intolerant patients and suitable low-dose options for pediatric asthma cases
 - Leverage existing respiratory infrastructure to enhance adherence and improve clinical outcomes
 - Explore fixed-dose combinations with existing respiratory medications for cost-effective solutions
-

Key Risks:

- Established competitors in the asthma market may hinder MOLDEP2's market share
 - Import-export patterns and local manufacturing constraints may limit market access
 - Existing inhaler preference for cheaper DPIs over MDIs may require strategy readjustment
 - Operational complexities with respiratory field salesforce in India due to tiered pricing and distribution networks
 - Need for additional clinical data on MOLDEP2's suitability for pediatric asthma cases and elderly patients
-

Web Intelligence Agent

Summary: The latest asthma guidelines from the Global Initiative for Asthma (GINA) 2022 recommend step-up treatment for symptoms, increased use of inhaled corticosteroids (ICS), and personalized treatment approaches based on patient characteristics and comorbidities. Real-world evidence from a study published in the Journal of Allergy and Clinical Immunology found that adding biologic therapy to ICS improved lung function and reduced exacerbations in patients with severe asthma.
